MPD for ICT Indicators

Alfatihah Reno Maulani

The need for new indicators

- The proportion of population covered by a mobile network (SDG indicator 9.c.1)
- The proportion of individuals using the Internet (SDG indicator 17.8.1)

Conventional Methods: Surveys

- **CHG (Charging Data):** The billing domain log stores successful charging transaction records such as calls, messaging, etc.
- **LBA (Location-Based Advertising):** The technology is used to pinpoint consumer's locations and provide location-specific advertisements on their mobile devices.
- **UPCC (Unified Policy and Charging Controller):** It provides policy, service, subscription, quota, and bearer resource management functions, as well as admission control for internet data usage.

VIEW SHED

A view shed analysis requires a viewpoint layer dataset.

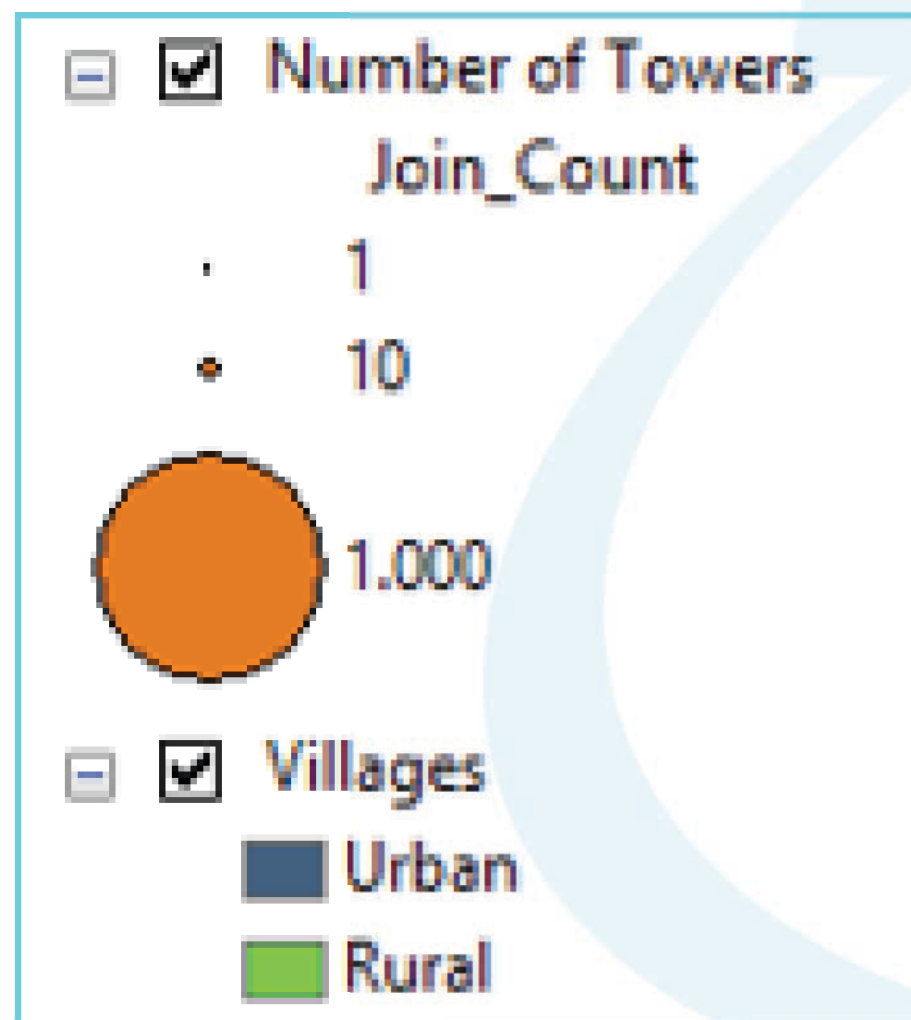

VIEWPOINT

The viewpoints refer to the cellular tower location.

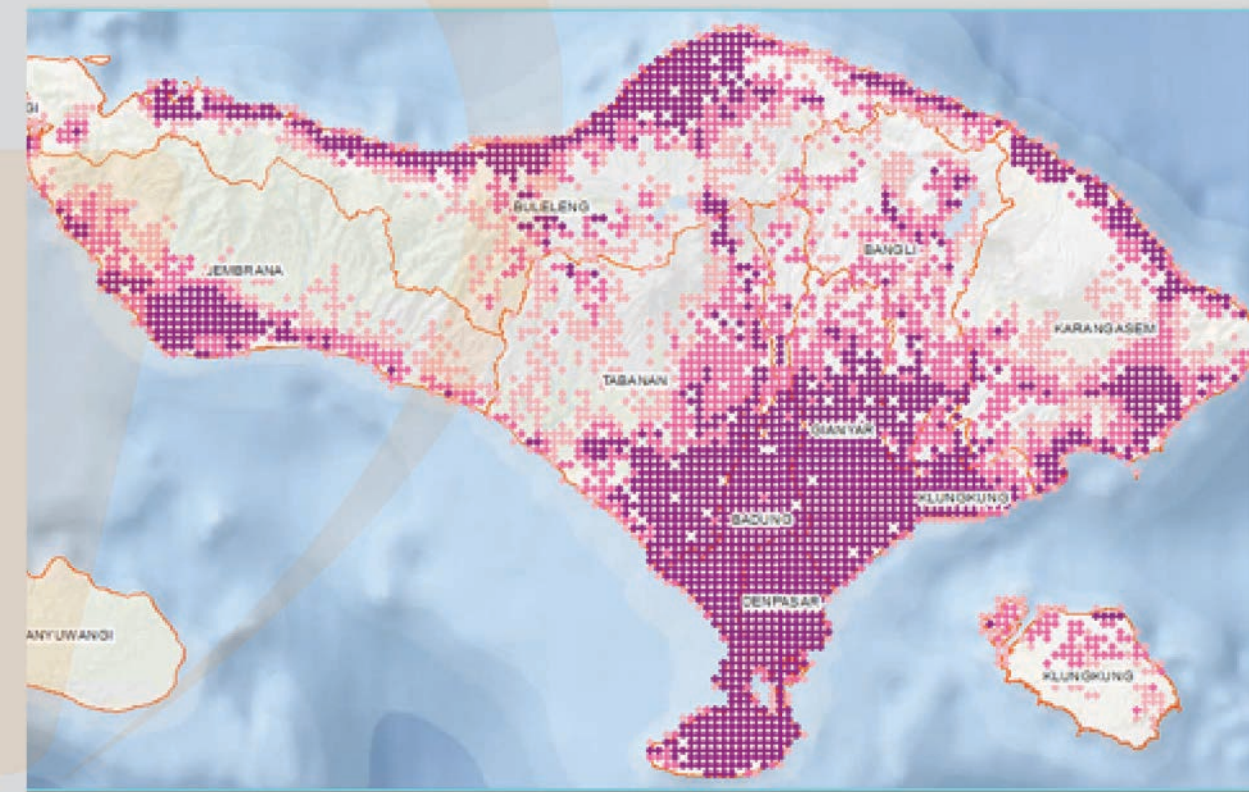

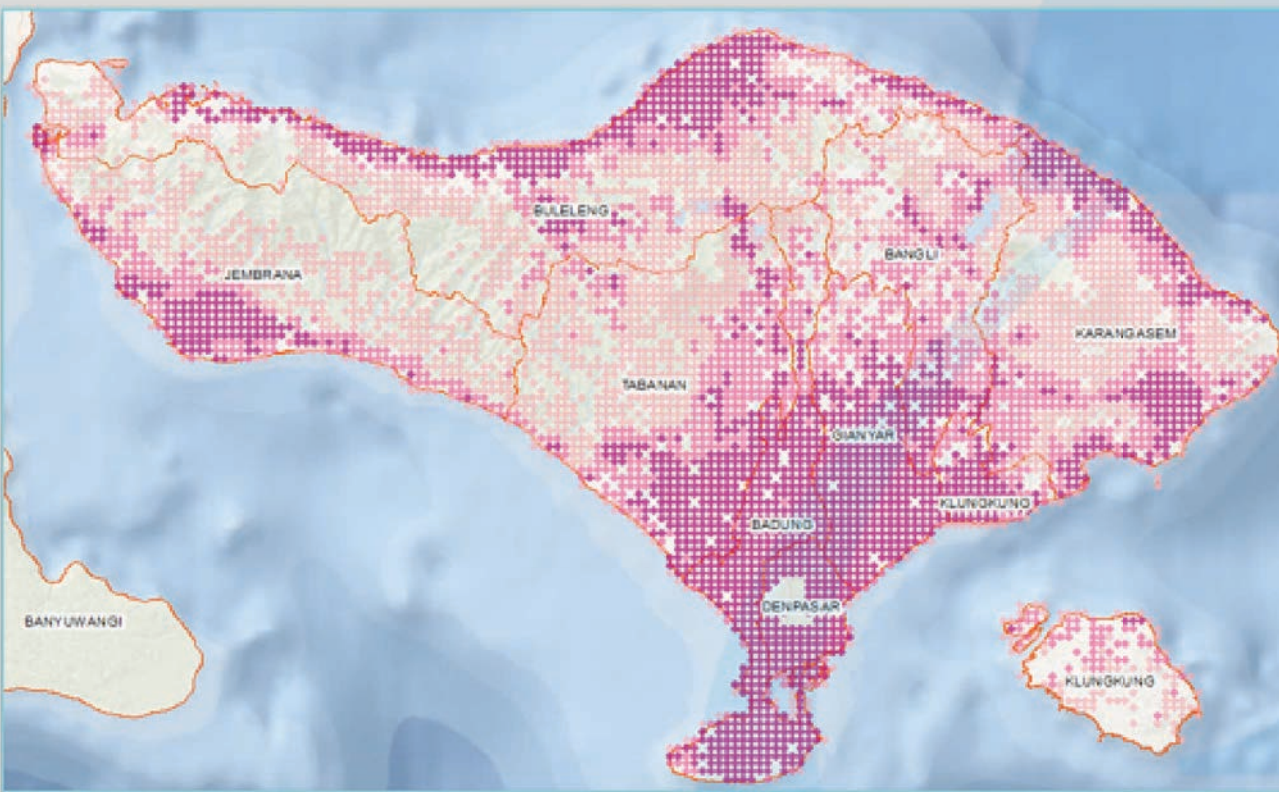

SIGNAL RANGE

A variable of Radius Value is used as a parameter to determine the range of the wireless signal.

CELL TOWERS IN BALI BASED ON AREA CLASSIFICATION

(SDG indicator 17.8.1)

The proportion of individuals using the Internet

**check subscriber data,
is there any event
that states internet
usage;**

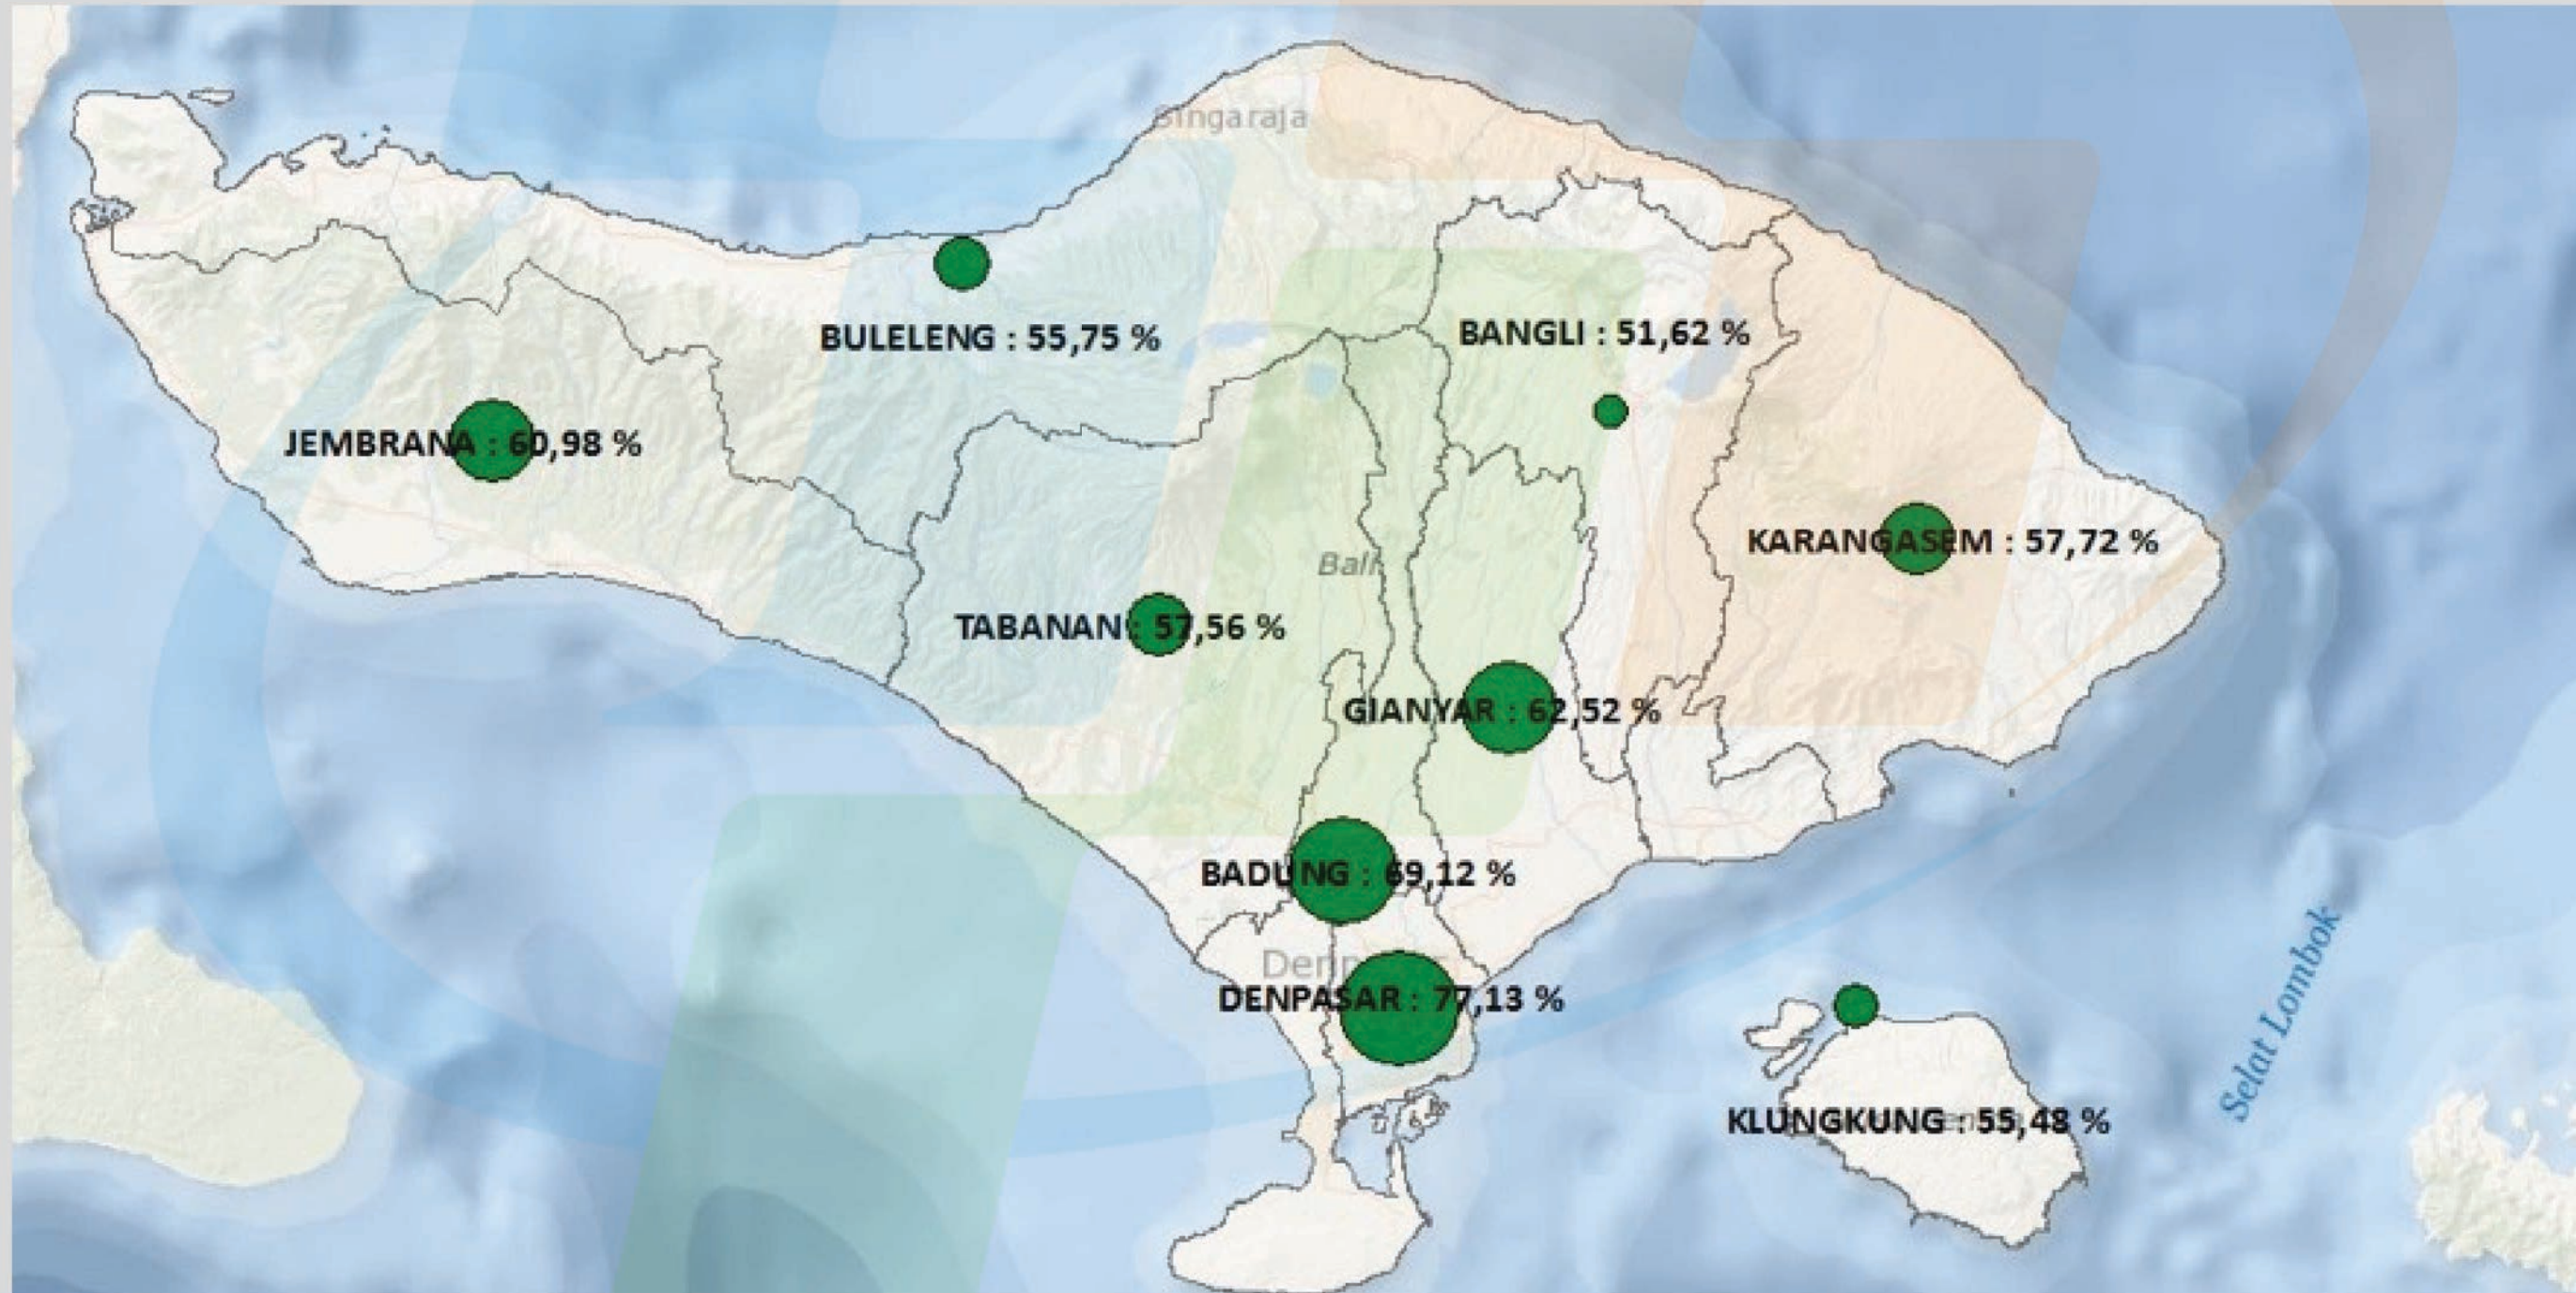

**compare Mobile
Broadband
Subscriptions
between All Cellular
and our MNO partner**

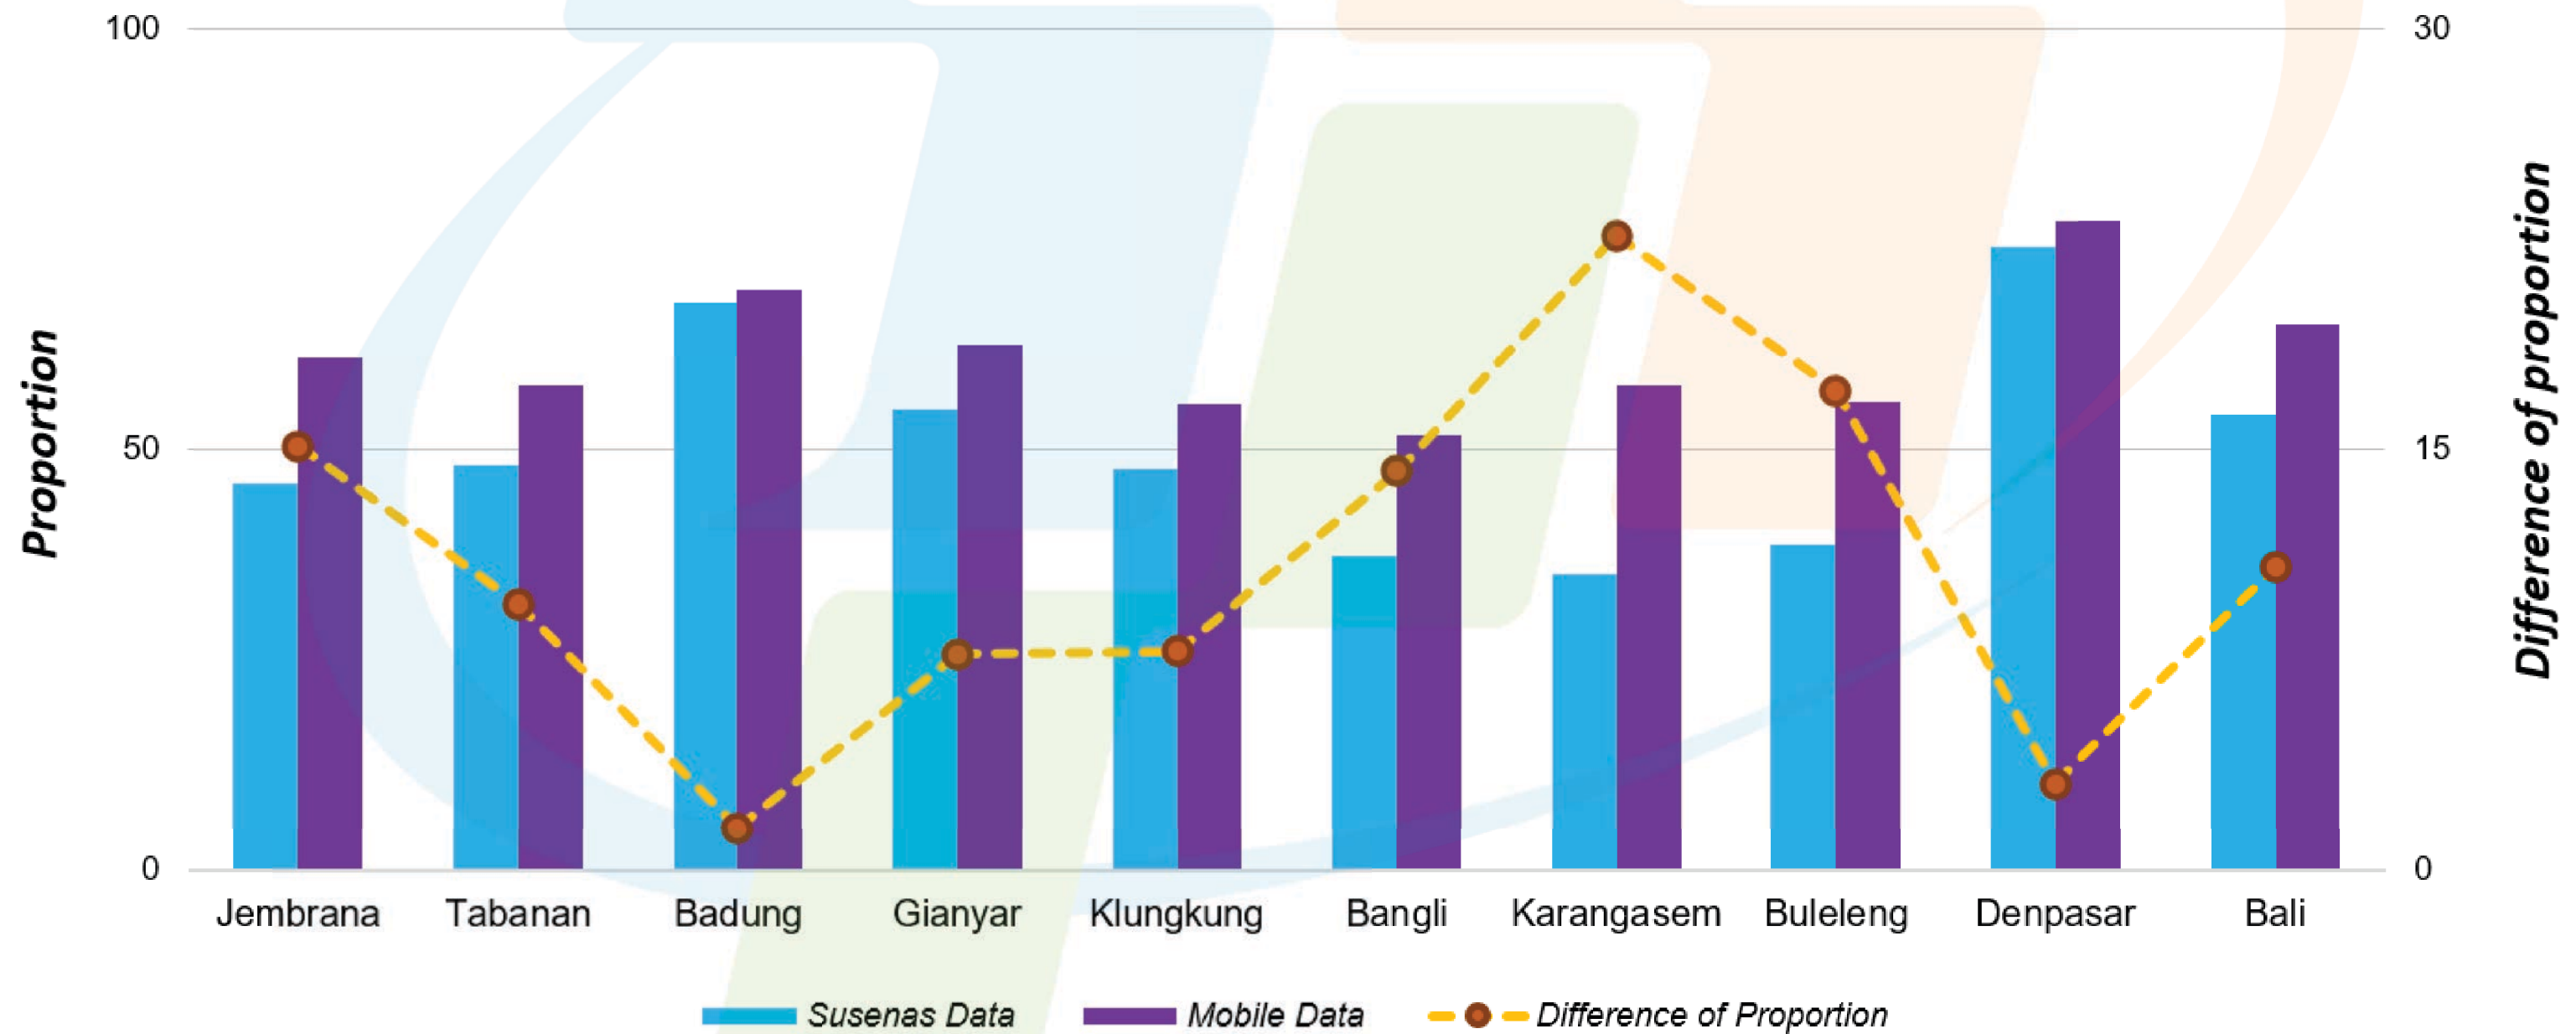

From this result, we found that Telkomsel is representative of the estimation of the indicator.

Correlation = 0.97

Challenges

DATA PROCUREMENT

during the research period,
most of the time was spent
negotiating in obtaining data
access rights

GRID POPULATION

Indonesia's population is not
yet available in a grid format,
but there is Worldpop as an
alternative data source

CHANGE IN ALGORITHM

if there is an algorithm
improvement, it is difficult to make
backward corrections because the
data is no longer accessible

THE REGULATION

changes to regulations may
occur even though there is a
contract
